

Easy Instructions to Restore Frog Legs to their Original Shape

STEP 1: Reshaping bent frog leg(s).

www.22-five.com

Although the 22-FIVE frog legs are made from the highest grade of thermoplastic, they can be bent out of their normal shape if left in a hot location for an extended period of time.

However, this is not a problem and the legs can easily be returned to their original shape using the following steps.

Tip: Place frog in the original box after use to keep legs from being reshaped.

!! This will also keep the frog legs from contacting soft plastic lures or other plastic objects which could melt the legs*

*(Replacement legs can be ordered from 22-FIVE).

STEP 2

www.22-five.com

Fill a waterglass almost to the very top with tap water. Then place the glass in a container such as the one shown at right before placing in the microwave.

A separate container as shown here is recommended since the glass of water will be *very* hot after being removed from the microwave and should not be touched.

Place the glass of water in a container such as the one shown here before placing in the microwave.

STEP 3

www.22-five.com

Place the full water glass and container into the microwave for 2 to 3 minutes (or until the water begins to boil or bubble).

**Be very careful when removing the water since it is very hot in order to soften the bent frog leg(s).*

STEP 4

www.22-five.com

While the hot water is heating in the microwave, place cold water in a second glass as shown at left.

This will be used to rapidly cool the legs after they are placed in the hot water so that they will hold their new shape.

Now, remove the hot water glass and container from the microwave and immediately place the bent leg fully into the hot water and hold for 10 to 20 seconds as shown at left.

STEP 5 (FINAL STEP)

Immediately remove the frog leg from the hot water and, with both hands, hold the frog leg in the shape that you want it to return to and immediately transfer the leg to the cold water glass as shown at left. *

*Make sure to fully submerge the leg into the cold water, then check the leg to make sure it is in the desired shape. You may have to repeat STEP 4 and this STEP 5 more than once to reach the perfect leg shape.

www.22-five.com

Here is the final result - the bent frog leg has been returned to its original shape to match the other one and to provide perfect balance and action!

Reminder: Remember to place the frog in its original packaging after each use to prevent the legs from "re-shaping" or from contacting soft plastic lures which could melt the legs.

THANK YOU FOR CHOOSING 22-FIVE. PLEASE LET US KNOW ANY QUESTIONS OR COMMENTS YOU MAY HAVE.
